DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Morris et al. (5,926,056).

Claim 1, Morris shows a voltage limiting semiconductor pass gate circuit (104 and 105, Fig. 2), comprising a first transistor (105) being operatively connected between an input node (106) and an output node (107) of said pass gate circuit, the first transistor having a control electrode (114) being biased to a supply voltage (V_{ss}, col. 2, lines 15-16), characterized by the control electrode being biased to the supply voltage by a resistor (108) connected in series with two back-to-back connected diode elements (201 and 202).

Claim 2, Morris shows a semiconductor pass gate circuit according to claim 1, wherein said diode elements are comprised of diode connected transistors (NMOS transistor).

Allowable Subject Matter

3. Claims 3-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

- further comprises a second transistor being operatively connected between said input node and said output node, the second transistor having a further control electrode coupled to the control electrode of the first transistor via the two back-to-back connected diode elements.
- the I/O cell having an input terminal an output terminal and at least one level detector circuit coupled between said input terminal and said output terminal, characterized by the semiconductor pass gate circuit in accordance with claim 1, coupled between said input terminal and said level detector circuit.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
